AUTOMATIC AUDIO RECORDER BY COTEL TELECOM

We have created a system that records all audio transmitted over the radio network, and allows you to access and download the recordings from an online interface.

The Automatic Audio Recorder connects to the customer's radio network and will automatically record everything that is received over the network. The operator can access the recordings from a web browser. Recordings from the last 21 days can be played and downloaded using the easy-to-use, intuitive web interface.

The Automatic Audio Recorder is suitable for any business where you feel the need to record what's transmitted over your radio network.

The system is self-maintaining, easy to use and will deter any abuse or misuse of your radio network.
