COTEL TELECOM

EMERGENCY TRANSMIT POINT

In the event of an on-site emergency, reliable communications are an essential requirement to ensure that any Health and Safety situation can be dealt with quickly and efficiently.

The easy-to-use Cotel Emergency Transmit Point (C.E.T.P) is the quickest and most efficient way to alert all management and first responders of an emergency situation, including Medical, Fire, Technical and other emergencies. By simply pressing the red button on the C.E.T.P, any member of staff can initiate an automated, clear and concise emergency voice message over the communications network, advising on the location of the incident. This simple operation ensures that anyone in the vicinity can raise the alarm, which will then be relayed to the nominated managers and first responders, allowing them to react to the situation.

Due to the simplicity of the hardware, the bespoke software and robust construction, the C.E.T.P is cost-effective to deploy and will seamlessly integrate into your existing communications network. The system can be configured with one or many transmit points, and the contents of the voice message can be tailored to the customer's individual requirements.

The system is very effective in a wide range of environments such as Mines and Quarries, Factories, Sports Centres, Schools, Colleges, Care Homes and many more.

If your business could benefit from an instant, reliable system to alert first responders and staff, then the Cotel Emergency Transmit Point could be an ideal solution.

Keep in touch with the action... and in control of your business.
